

For Immediate Release: August 24, 2023

## New! Factory Team Diff Decoder

Factory Team Diff Decoder mounted to a 1:10 buggy

Items included with the Factory Team Diff Decoder

The Factory Team Diff Decoder is an indispensable tool for the hardcore racer. The Diff Decoder displays a consistent, measured value for differential hardness rather than relying on an estimation or feeling. This measurement can be used to build differentials to a specific hardness, fine tune to improve vehicle performance, understand the differences between oil brands and temperature, or to replicate an existing differential.

The Diff Decoder's machined aluminum body is compact and lightweight with a 5-digit LED display suitable for measurement of a wide variety of differentials. Includes one 1:10 7mm hex adapter to measure at the wheel, and one 1:8 pin adapter to measure at the diff outdrive.

A 5V power source is required to operate.
